

SCROLL BAR FABRIC PROTECTORS

JUNE A. ABEL, 383 PROSPECT RD., BEREA, OHIO 44017

FIG. 3 is a one dimensional view of the layers used in making the present invention.

DETAILED DESCRIPTION OF THE INVENTION

01 Referring to FIG. 1, the needlework accessory 1 is designed generally for the use by a needleworker to place on each end of a non-working scroll bar after the needlework fabric has been mounted to protect the exposed ends of non-working fabric from damage from repeated handling.

02 Referring to FIG. 1 and FIG. 2, the needlework accessory 1 wraps around the end of a scroll bar 3 and is held together securely by the meeting of female and male magnets 2 which are incorporated inside the ends of the needlework accessory. The magnets 2 provide a snug meeting of the fabric ends of the needlework accessory. The needlework accessory is easy to remove or reposition by separating the fabric ends of the needlework accessory with your hands. This produces no harm to needlework fabric mounted on a scroll bar or to the scroll bar itself regardless of how long the needlework accessory remains over the non-working ends of the needlework fabric.

03 Referring to FIG. 3, the needlework accessory is comprised of three layers; the fabric for the outer layer 4, a lightly padded middle layer topped with another piece of fabric 5 & 6 on the inside. The lightly padded middle layer serves to cushion the magnets and protect the ends of the non-working fabric. The three layers are sewn together around the outer edges with pockets made 7 for the magnets to slip into which are then sewn closed 8 encasing them inside the needlework accessory.
